Metric Mosaic

Building a Secure Future, One Metric at a Time

SECURITY DASHBOARDS

Where are security metrics?

In today's digital landscape, businesses carefully monitor key performance indicators (KPIs) across various departments such as sales, marketing, HR, and finance to gauge their performance and make informed decisions. However, when it comes to information security, the scenario is different. Unlike other business domains, there is a lack of standardized industry metrics in the realm of security.

While some forward-thinking information security professionals define and track their security metrics, many are still navigating in the dark. It's crucial for every information security professional to recognise the importance of security metrics and take proactive steps to define, collect, analyse, and track them effectively. By doing so, organisations can enhance their security posture, align their security efforts with business objectives and track their control effectiveness.

Introducing
Metric Mosaic

"
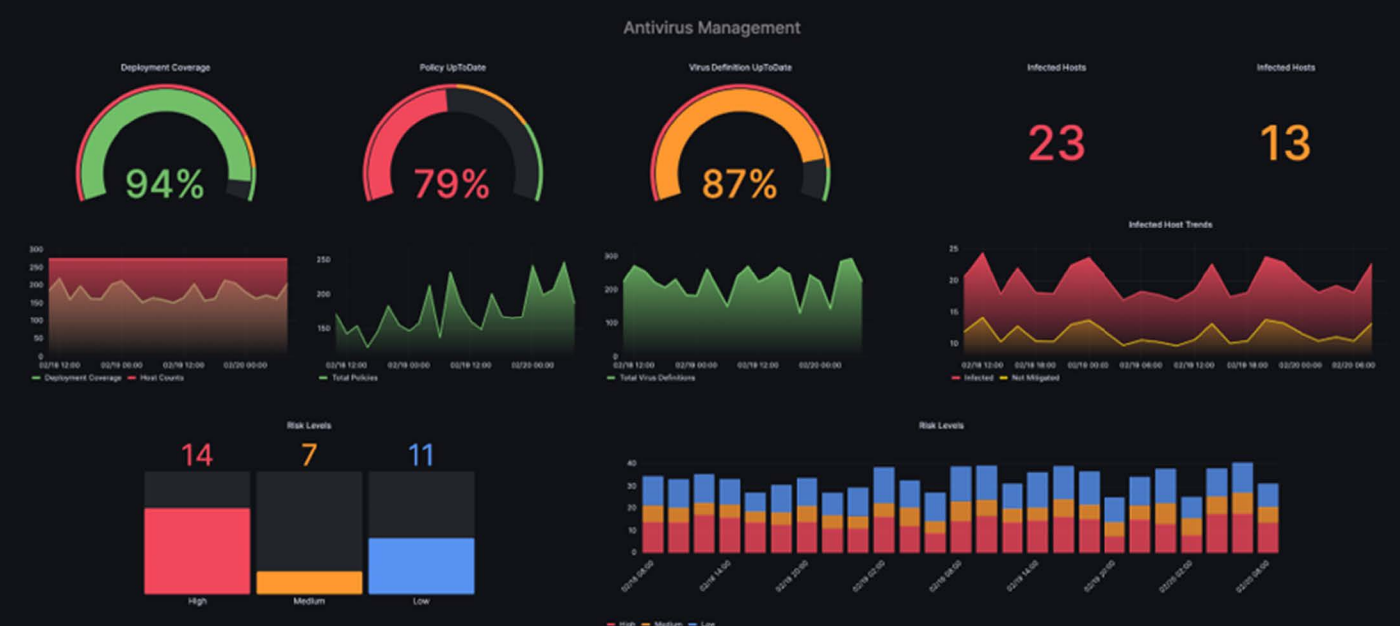

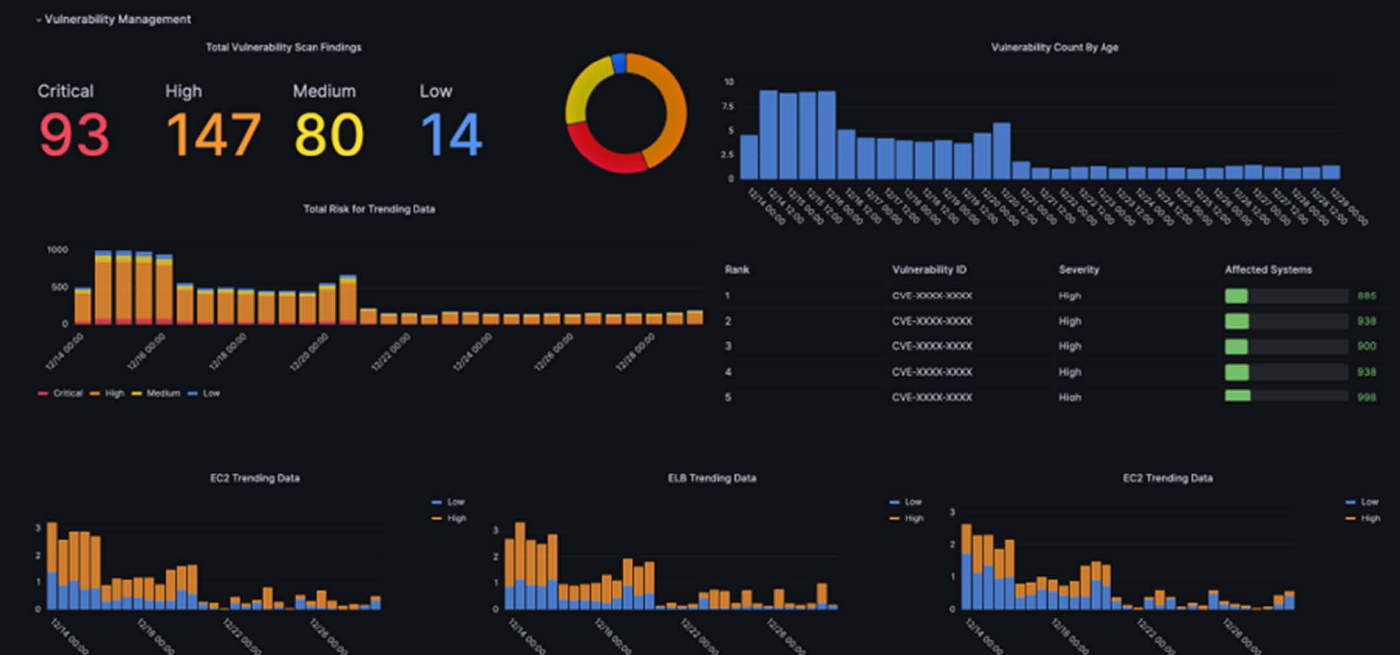

Metric Mosaic is a pioneering technology company dedicated to fostering collaboration among information security professionals and promoting the widespread adoption of security metrics for enhanced security governance. Our vision is anchored on three core pillars.

Through three pillars, Metric Mosaic is committed to empowering information security professionals and CISOs with the tools, resources, and networks they need to navigate the evolving landscape of information security and safeguard their organisation's against emerging threats.

Mosaic Platform:
At the heart of Metric Mosaic lies our innovative Mosaic Platform, designed to streamline the collection, storage, analysis, and visualization of metrics derived from an enterprise's infrastructure in a vendor agnostic manner. By providing a centralized hub for managing security metrics, we empower organizations to gain actionable insights.

Content Library (Q4-2024):
Metric Mosaic will offer a comprehensive content library of security metrics. This repository will serve as a valuable resource for CISOs, enabling them to easily select and utilize metrics to drive informed security decisions.

Exchange Market (Q2-2025):
Our Market will serve as a community hub where CISOs can publish their own content and exchange notes on use with their peers. By leveraging the collective expertise of the community, CISOs will be able to enhance their security strategies and drive continuous improvement in security governance.

The Mosaic Platform

The Mosaic Platform serves as the cornerstone of Metric Mosaic's innovative approach to security metrics management. This powerful platform is designed to streamline the collection, fusion, analysis, and visualization of security metrics, providing organizations with unparalleled visibility into their security posture.

Practical Data Collection

With the Mosaic Platform, organizations can effortlessly collect data from any information system using simple and open-sourced "collectors". Whether it's existing tools or custom-built solutions, Mosaic can seamlessly integrate data from diverse sources, enabling comprehensive security metrics tracking.

Technology & Tool Independence

Thanks to its architecture, Mosaic collects and stores metric data points in an abstract way - independent of technology and tools being used. Your change in tooling does not affect metrics collection nor it resets past collected data.

Robust Data Storage and Analysis

All collected data points are securely stored in a time-series database, enabling organizations to perform in-depth time series analysis ,even with the help of AI, and define composite metrics that provide holistic insights into their security landscape.

Dynamic Visualization Options

At the heart of the Mosaic Platform lies a rich array of visualization options, offering over 100 different visualization techniques to present collected metrics in a clear and actionable manner. From charts and graphs to heatmaps and dashboards, organizations can choose the visualization style that best suits their needs.

Role-Based Dashboards

Recognizing the diverse needs of stakeholders within an organization, Mosaic allows users to define multiple dashboards tailored to different roles and responsibilities. This ensures that each stakeholder has access to relevant and actionable insights, empowering informed decision-making at every level.
